

Final Project: Conference Paper Management System

Chohra Chemseddine

April 26, 2025

Project Description

This final project extends the basic conference website by adding a complete backend system for:

- User accounts and roles (authors, reviewers, chairs)
- Paper submission and management
- Review assignment and evaluation
- Decision tracking

1 Core Features

1.1 User Authentication & Role Management

- Registration with user types (Author, Reviewer, Chair), authors can simply register while reviewers and chairs should be added by (another) chair.
- Login/logout functionality
- Role-based access control

1.2 Paper Submission System

- Author dashboard for paper submission
- File upload (PDF/DOCX)
- Metadata collection (title, abstract, keywords)
- Submission status tracking

1.3 Review Management

- Chair interface for assigning reviewers
- Reviewer dashboard to view assigned papers
- Evaluation forms with scoring criteria
- Comments and feedback system

1.4 Decision System

- Chair interface for making final decisions
- Notification system for authors
- Acceptance/rejection tracking

2 Deliverables

- Complete Laravel project (without vendor/node_modules) ideally in a zip file
- For github users, I accept a link to your repository

3 Optional Features

- Review history and versioning
- Advanced analytics and reporting for chairs
- Email notifications for important events
- Responsive design for mobile access
- User activity logs

4 Evaluation Criteria

- Functionality: Does the system work as intended?
- Code Quality: Is the code clean, well-organized, and documented?
- Use of laravel features: Are Laravel's features effectively utilized?
- Optional features: Have any optional features been implemented?
- In case of delay, a penalty of 0.25 points per day will be applied (after 20/06/2025).
